WebJars are client-side web libraries (e.g. jQuery & Bootstrap) packaged into JAR (Java Archive) files.

- Explicitly and easily manage the client-side dependencies in JVM-based web applications
- Use JVM-based build tools (e.g. Maven, Gradle, sbt, ...) to download your client-side dependencies
- Know which client-side dependencies you are using
- Transitive dependencies are automatically resolved and optionally loaded via RequireJS
- Deployed on Maven Central (http://search.maven.org/)
- Public CDN, generously provided by: JSDELIVR (http://www.jsdelivr.com)

WebJars come in three flavors:

NPM WebJars

- Instant creation & deployment
- On-demand releases by anyone
- Artifact contents mirror NPM package

Browse & Add NPM WebJars (/npm)

Bower WebJars

- Instant creation & deployment
- On-demand releases by anyone
- Artifact contents mirror Bower package

Browse & Add Bower WebJars (/bower)

Classic WebJars

- Manual packaging & deployment
- On-demand by the WebJars team
- Human-created RequireJS config

Browse & Request Classic WebJars (/classic)

All Deployed WebJars

Filter

Name	Versions	Build Tool: SBT / Play 2 | Maven | Ivy | Grape | Gradle | Buildr | Leiningen
