# Monolol

PSR-3 compliant lol-ggger

## QA

build passing Scrutinizer 9.83

## INSTALLATION

Use composer:

```
composer require PHPointless/monolol
```

## HOW TO USE IT

Monolol provide new wrapper handler for Monolog : LolHandler. LolHandler will apply a Lolifier that will do some stuff on records handled by wrapped handler.

For example, we want to randomly shuffle log message words of all records that will be handled by a Monolog StreamHandler. Here is the code that will do the trick:

```
<?php

use Monolog\Logger;
use Monolog\Handler\StreamHandler;
use Monolol\Handlers\LolHandler;
use Monolol\Lolifiers;

$logger = new Logger('myLog');
$streamHandler = new StreamHandler(__DIR__ . '/monolol.log');

$lolHandler = new LolHandler($streamHandler, new Lolifiers\Shuffle());

$logger->pushHandler($lolHandler);

$logger->info('My littlest pony');
$logger->error('This burger has no cheese');
```

## AVAILABLE LOLIFIERS

- Shuffle:** Words contained in record message will be randomly shuffled
- Confuse:** This lolifier will change randomly the log level of the record
- GeekTime:** Records will be handled only if it's 1:37pm (13:37)
- Hangman:** Wants to play hangman game while reading your logfiles ?
- Hash:** records message will be hashed with an algorithm randomly chosen
- LaMerNoire:** records message will be replaced by the following string : 'La mer Noire'
- Mirror:** records message content will be reversed (desrever eb lliw tnetnoc egassem sdrocer)
- NotGiveAFuck:** message of records having loglevel above INFO will be replaced by the following string : "It seems that your application has encountered an issue. But as we don't give a fuck, we will not tell you what the problem is. Have a good day"
- Quote:** records message will be replaced by a quote randomly chosen. Quote Lolifier needs a QuoteProvider. Here's an example of how to use it :

```
$quoteProvider = new Lolifiers\QuoteProviders\Kaamelott\Kadoc();
$lolHandler = new LolHandler($streamHandler, new Lolifiers\Quote($quoteProvider));
```

If you want quotes from more than one provider, you can use QuoteProviders\Collection

```
$quoteProvider = new Lolifiers\QuoteProviders\Collection();
$quoteProvider->add(new Lolifiers\QuoteProviders\Kaamelott\Kadoc())
    ->add(new Lolifiers\QuoteProviders\Kaamelott\Karadoc())
    ->add(new Lolifiers\QuoteProviders\Kaamelott\Perceval());
$lolHandler = new LolHandler($streamHandler, new Lolifiers\Quote($quoteProvider));
```

- Warp:** handle records will travel through the Warp
- Yell:** TO READ YOUR LOG FILES IN NOISY ENVIRONMENTS
- Yolo:** "An error? What are you talking about? There was no error!". All records having loglevel above INFO will not be handled
- Tourette:** Monolog is suffering a Tourette's syndrom. This lolifier needs a SwearWordsProvider. Here's an example of how to use it :

```
$swearWordsProvider = new Lolifiers\SwearWordsProviders\DefaultProvider();
$lolHandler = new LolHandler($streamHandler, new Lolifiers\Tourette($swearWordsProvider));
```
