Also, operator overload. The best way to introduce certainty into a project.
operator ** = (left, right) => Math.pow(left, right)
2**3 === 8

We desperately need a reference type to make JavaScript great again

```
var example = 12
ref another = example
another = 34
// example is 34
```

Mutable Promises are coming. ES2017. A vote for me is a vote for mutability.

JavaScript Dates are a great example of why mutability is great.
JavaScript without Dates would be like Tinder without JavaScript.

If I'm elected, we'll spread mutability to numbers, strings, and symbols!

ECMAScript 2015 symbols such as Symbol.isConcatSpreadable are ridiculous
In my administration, we'll replace "well-known" symbols with emoji

TIME TO ACT
Frameworks are killing young developers abroad.
Tell a friend of yours why you're not using frameworks.
Convince them to quit.

Bower lied about being a package manager. It lied about using "version" in bower.json. How can people trust it with their dependencies?

Trump on JavaScript @realDonaldTrump · Nov 13

How stupid are Bower users? Did they really believe a GitHub mirror could be bestowed the "package manager" title? Such BULLSHIT.

Make jQuery part of the DOM.

Retweets 29 Likes 30

Trump on JavaScript @realDonaldTrump · Nov 13

If I'm elected, the DOM will be democratized, available on the server-side, and all its API will sustain much needed breaking changes.
