The world must accept that the HPV vaccine is safe

Every year brings 528,000 new cases of cervical cancer and 266,000 deaths, linked to human papillomavirus (HPV). We have a highly effective HPV vaccine, but suspicion stands in the way of its adoption in many countries. How can we dispel this mistrust?

The not-so-good news is that not everyone believes them. We have learned the importance of monitoring public sentiment, responding promptly to concerns and engaging and listening to people.

The projects; the pressure had come from an activist women's group far away in New Delhi. When the group's demands for public dialogue about the vaccine were met by these patients - i.e. one cannot fake POTS, CRPS or SFN.

The recent EMA review did not properly study the question of whether HPV vaccine is indeed associated with autoimmune disorders. The recent EMA review did not properly study the question of whether HPV vaccine is indeed associated with autoimmune disorders.

The world must accept that the HPV vaccine is safe...
