How-To Geek

Here's What Happens When You Install the Top 10 Download.com Apps

We installed the top 10 apps from Download.com and took them for a test drive to see what happened. I guess maybe you might have a good guess. We'll forge ahead anyway and see what happens, just to be fair to you.

Before we get started, we'd like to point out that Download.com is owned by CNET, which is the reason we chose to test apps exclusively downloaded from Download.com. We're not fans of the site and we've said that before, but CNET's ownership of the Download software has a regular, clueless, user target.

Download.com has a reputation for packaging third party bundled with legitimate screens with the default options being install what's wanted. Certainly we're going to install an application but we're not fans of the extra upsells that result. So, we're going to assume the presence of a regular non-geek user.

Download.com has also been known to [wrap installers in boilerplate](http://www.howtogeek.com/howto/windows-vista/stop-boilerplate-software-from-installing-on-windows-vista/) boilerplate claims that they do not alter instructions software the host, and that they do not "wrap" any software that contains the following:

```
Software that installs screens, Popup banners, malicious adware,
spyware, or other malicious software or any piece during or after
installation.
Software that installs without notice and without the user's
consent.
Software that includes or uses vulnerabilities when installed.
Software that asserts or modifies end users' default browsers,
search engines, or homepages without the user's consent or otherwise
overrides standard OS user preferences.
Software that installs to a concealed manner or denies users an
uninstall option, or that does not uninstall in a timely manner
pursuant to the installation.
Software that induces installation by making false or misleading
claims about the software or its functionality.
```

I mean, with all those provisions it goes from the truly popular (one time at CNET, why would anybody put it?) I mean, CNET likes to install every right?Right.

Dropgot Do NOT Try This at Home!

Seriously, we don't recommend doing this at home or your primary PC, unless you want to make your computer a gaming platform of another. If you do decide to try it, [make sure you've backed up first!](http://www.howtogeek.com/howto/windows-vista/backup-your-windows-vista-system-with-windows-backup/)

Time to begin. Top arrow is target!

The first app we downloaded was Dropbox via the Windows downloader page and take a look at their Monster Downloader. Not to worry, we know that it's not really the 3rd most downloaded app of all time, but it's [pretty popular](http://www.howtogeek.com/howto/windows-vista/dropbox-vs-windows-live-skydrive-vs-google-docs-vs-box-net/). 1811 hits on [Lifehacker](http://lifehacker.com/), 1 bazillion of the. The file is a paltry 4.6 meg and it's a single, bright, custom .EXE installer, onward!

The plan is to download and install the top 10 apps, but as you can see in the first few tips, the box has both antivirus, and [registry cleaning](http://www.howtogeek.com/howto/windows-vista/should-you-use-a-registry-cleaner-on-windows-vista/) crap in there as well. We're not fans of registry cleaners and we're not fans of antivirus software that runs all the time. We're not fans of [registry cleaners](http://www.howtogeek.com/howto/windows-vista/should-you-use-a-registry-cleaner-on-windows-vista/) and we're not fans of antivirus software that runs all the time. We're not fans of registry cleaners
