Coming in 2017 – New AWS Region in France

As cloud computing becomes the new normal for organizations all over the world and as our customer base becomes larger and more diverse, we will continue to build and launch additional AWS Regions.

Bonjour la France

I am happy to announce that we will be opening an AWS Region in Paris, France in 2017. The new Region will give AWS partners and customers the ability to run their workloads and store their data in France.

This will be the fourth AWS Region in Europe. We currently have two other Regions in Europe — EU (Ireland) and EU (Frankfurt) and an additional Region in the UK expected to launch in the coming months. Together, these Regions will provide our customers with a total of 10 Availability Zones (AZs) and allow them to architect highly fault tolerant applications while storing their data in the EU.

Today's announcement means that our global infrastructure now comprises 35 Availability Zones across 13 geographic regions worldwide, with another five AWS Regions (and 12 Availability Zones) in France, Canada, China, Ohio, and the United Kingdom coming online throughout the next year (see the AWS Global Infrastructure page for more info).

As always, we are looking forward to serving new and existing French customers and working with partners across Europe. Of course, the new Region will also be open to existing AWS customers who would like to process and store data in France.

To learn more about the AWS France Region feel free to contact our team in Paris at aws-in-france@amazon.com.

A venir en 2017 - Une nouvelle région AWS en France

Je suis heureux d'annoncer que nous allons ouvrir une nouvelle région AWS à Paris, en France, en 2017. Cette nouvelle région offrira aux partenaires et clients AWS la possibilité de gérer leurs charges de travail et de stocker leurs données en France.

Cette Région sera la quatrième en Europe. Nous avons actuellement deux autres régions en Europe – EU (Irlande) et EU (Francfort) et une région supplémentaire ouvrira dans les prochains mois au Royaume-Uni. Cela portera à dix le total des Zones de Disponibilités (AZ) en Europe permettant aux clients de concevoir des applications tolérantes aux pannes et de stocker leurs données au sein de l'Union Européenne.

Cette annonce signifie que notre infrastructure globale comprend désormais 35 Zones de Disponibilités, réparties sur 13 régions dans le monde et que s'ajoute à cela l'ouverture l'année prochaine de cinq régions AWS (et 12 Zones de Disponibilités) en France, au Canada, en Chine, dans l'Ohio, et au Royaume-Uni (pour plus d'informations, visitez la page d'AWS Global Infrastructure).

Comme toujours, nous sommes impatients de répondre aux besoins de nos clients français, actuels et futurs, et de travailler avec nos partenaires en Europe. Bien entendu, cette nouvelle région sera également disponible pour tous les clients AWS souhaitant traiter et stocker leurs données en France.

Pour en savoir plus sur la région AWS en France, vous pouvez contacter nos équipes à Paris: aws-in-france@amazon.com.

— Jeff;
