

TaskBoard

A simple, visual way to keep track of what needs to get done

About

A Kanban (http://en.wikipedia.org/wiki/Kanban_board)-inspired app for keeping track of things that need to get done.

The goal of TaskBoard is to provide a simple and clean interface to a functional and minimal application for keeping track of tasks. It's not trying to be the next Trello or LeanKit. What TaskBoard does is make it easy to start keeping track of anything you need to get done. The visual aspect of a board allows for easy status checks, and can be motivating for users who want to move their tasks to the next column.

Like TaskBoard?

Anything you can share helps with the continued development of TaskBoard.

Thanks

Without the following open-source projects, TaskBoard would have been much more difficult to create:

Front end

AngularJS (https://angularjs.org/)	jQuery UI Datepicker (http://jqueryui.com/datepicker/)
Bootstrap (http://getbootstrap.com/)	Spectrum (https://bgrins.github.io/spectrum/)
marked (https://github.com/chjj/marked)	noty (http://ned.im/noty/)

Back end (RESTful API)

Slim Framework (http://www.slimframework.com/)
RedBeanPHP (http://www.redbeanphp.com/)

Features

- Free, Open-Source (MIT License (<http://opensource.org/licenses/mit-license.html>)), and Self-Hosted
- Easy install - just copy to web host and go!
- Unlimited boards (projects)
- Customize columns within boards and persistent expand/collapse per user
- Items allow custom colors, categorization, Markdown descriptions, attachments, and comments
- Items display complete history of activities
- Full history of all board activity for admins
- Easy customization
- Basic User management (admin, and regular users)
- No external dependencies
- Creates SQLite database on first use
- RESTful API
- Works on almost any web host (only needs PHP5 w/SQLite pdo)
