finally, DRM comes to making tea
[gizmodo.com/a-400-smart-te...](#)

The Leaf will only b
own teas—Sips (Sel
Profile System)—w
Cup-like pods. The
15 samples, but if y
yourself from the T
they cost between \$
only contain about t
ch. For \$9 I can go to [World Market](#) and buy 80 bags o
hire Gold. Though if I want to brew it in a Teforia, or a
ea, I'll have to shell out \$1,000 for the Teforia Classic.
buy for \$1,000 include almost all of a Macbook, two X
es, or 1,000 iced teas from McDonald's.

the entire pod into the machi
s dumped in the Infusion Glob
e the Carafe. Yes, every Part is
in RFID tag that the Leaf read
e tea, including the temperatu
uses. The RFID chip is scanne
ice what recipe to use.

[@libbycwatson](#) So can the DRM be "hacked" by saving an RFID from an old pod and presenting it to make any old loose leaf? Bonus: ok w/DMCA!

There's a correct temperature for brewing almost all tea. It's 100°C, straight from the kettle
