About 30GB of data on F-35 joint strike fighter and AU naval vessels stolen in hack.

How..?

Router: admin/admin

theaustralian.com.au/national-affai...

He said the hacker could have easily accessed the data.

“It turns out the actor didn’t even have to exploit the vulnerability of this service. When it was set up it was set up with default credentials and they were never changed. Admin: Admin got you into the web admin portal and you could hit that from the internet, guest: guest as well, obviously,” he said.

The Australian Signals Directorate employee was remarkably open in his remarks too. Implies continuously compromised boxes are everywhere.

Mr Clarke said departments routinely told ASD they had found remote-control - webshells on their computer servers.

“It really makes me cry every time a government department calls up and says ‘hey ASD just letting you guys know we have a China trouble webshell or whatever webshell on our server but don’t worry we’ve deleted it, it’s good to go’,” he said.
