Occurrences of words in the Linux kernel source code over time

Legend:
- fuck*
- shit*
- crap*
- bastard
- penguin
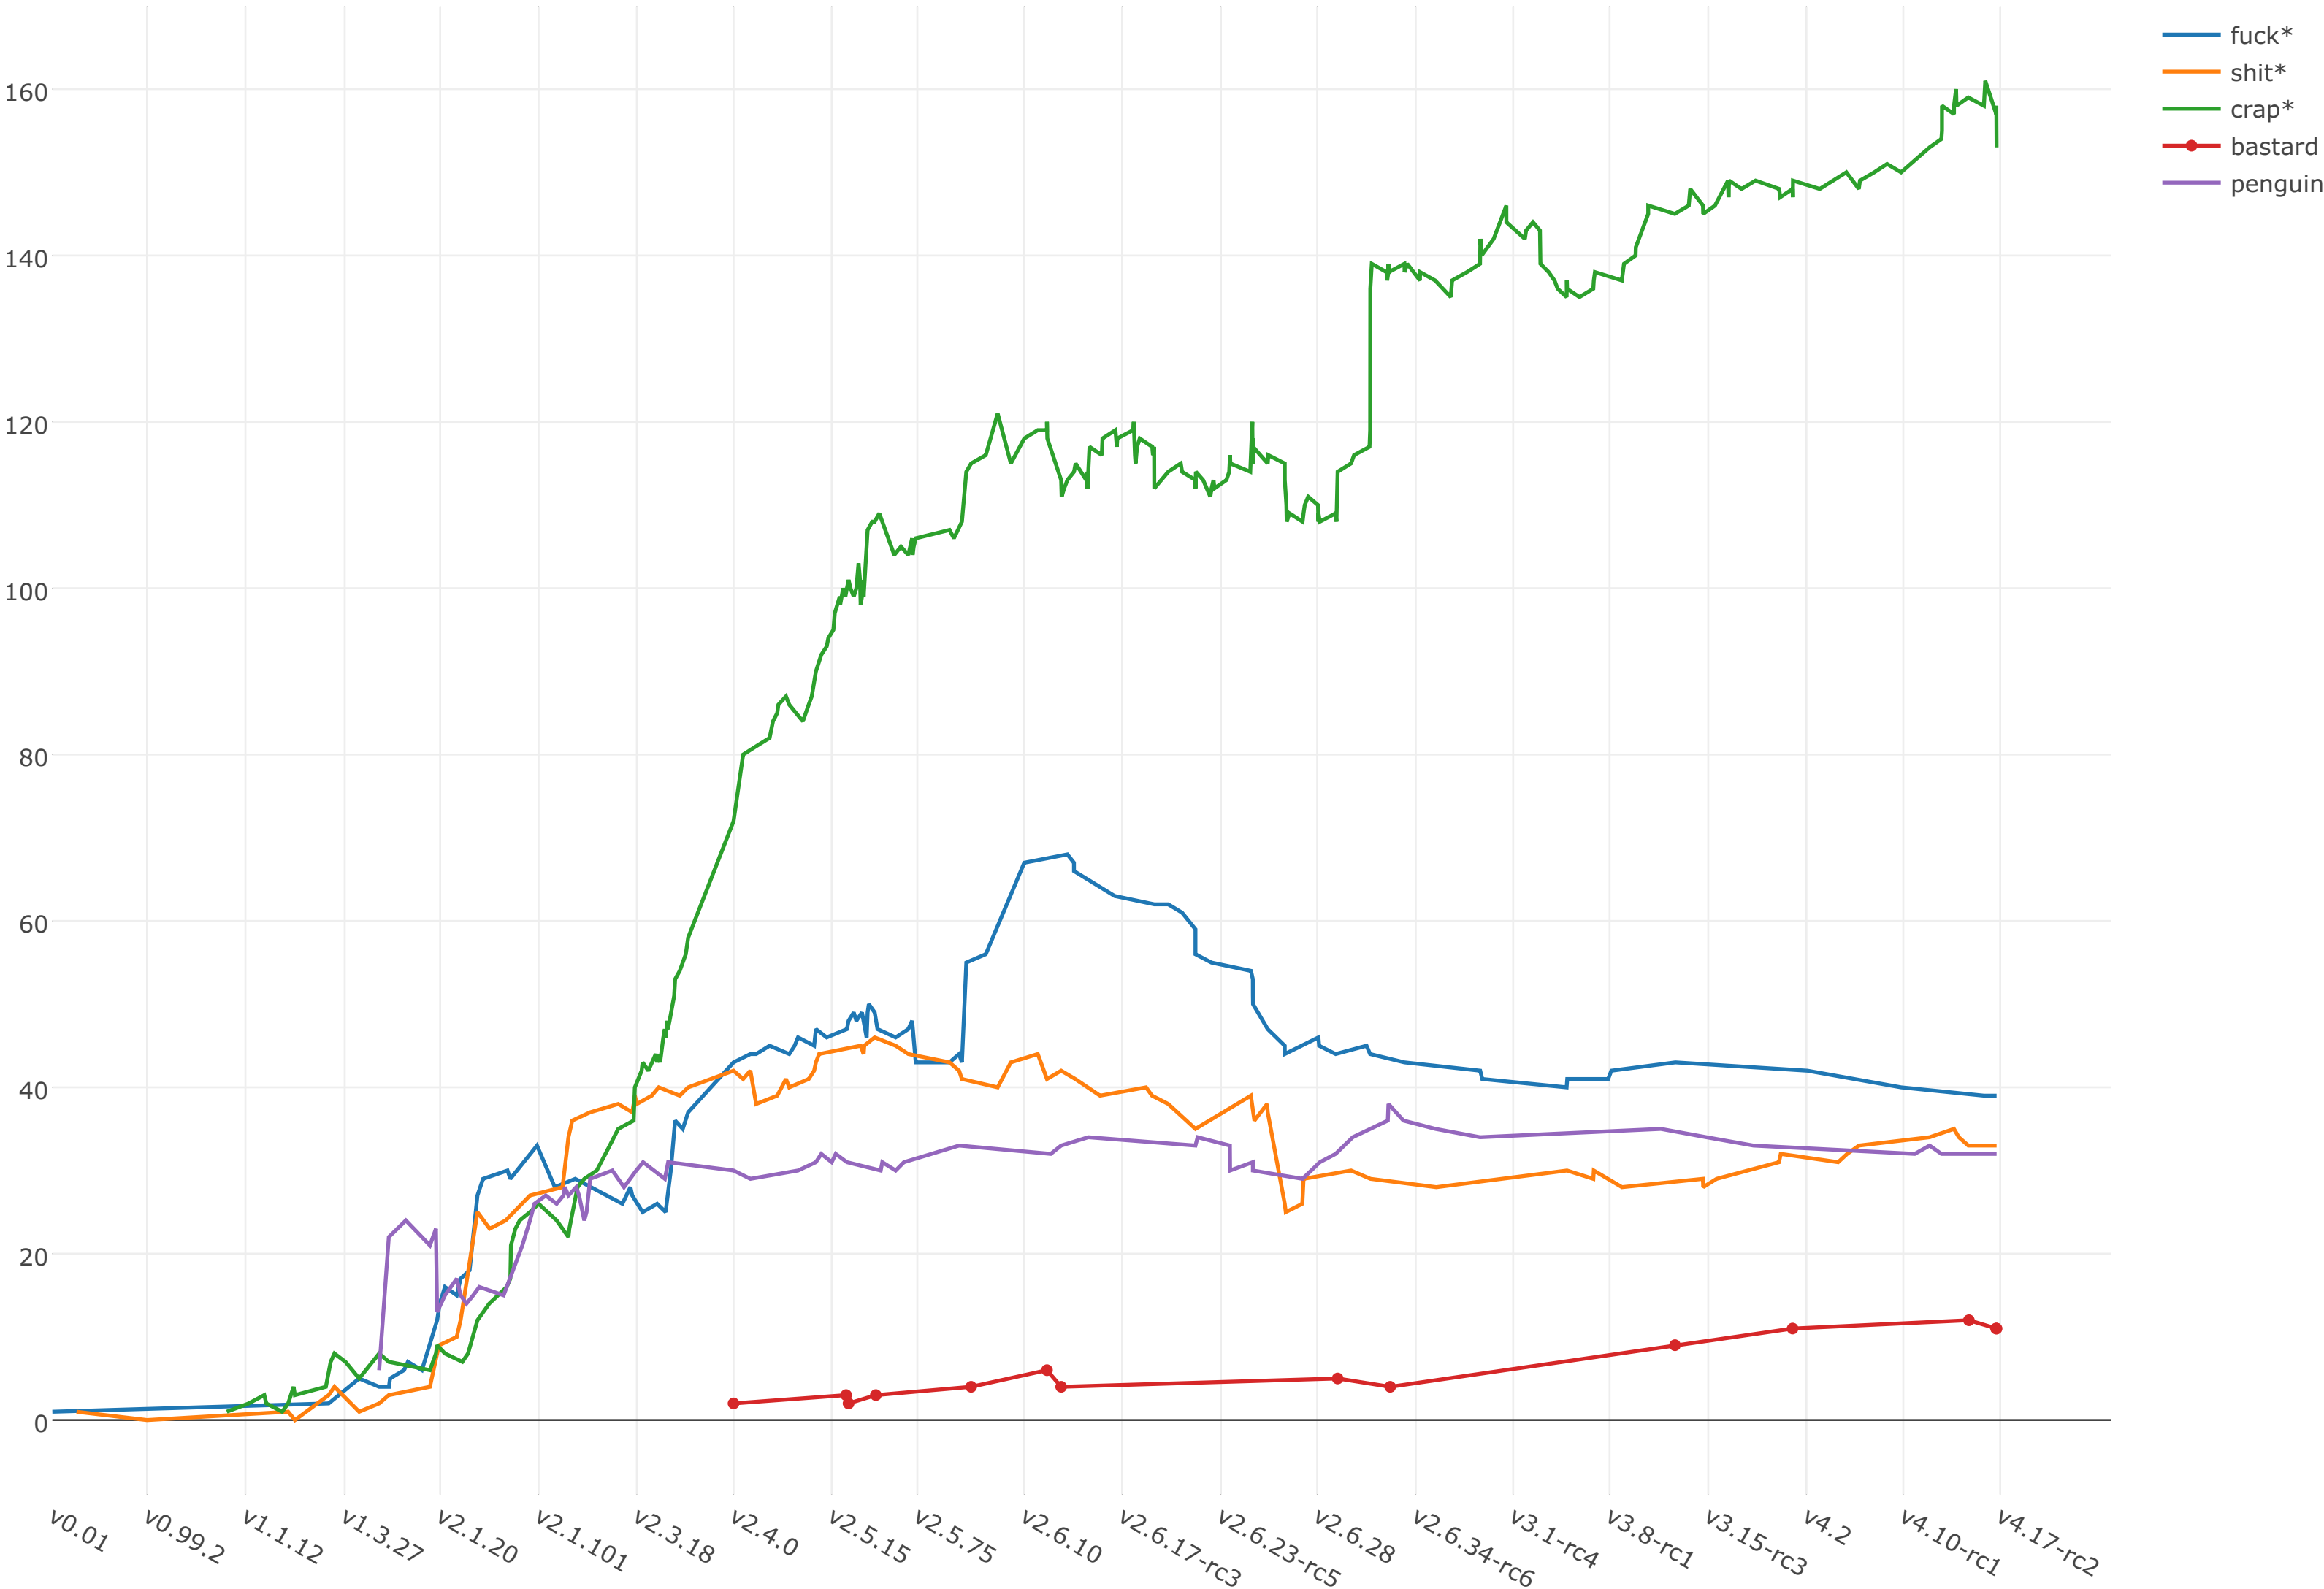

How many times are words, names or functions found in the Linux kernel source code? Browse an example or write your own comma-separated list to find out! You can use `*` for wildcards, `foo|bar` for sums, and a word is defined as `\<[[:alnum:]_]+\>` (ignoring case, considering accents).
