Hi, I'll redo the test with 12-STABLE next month, just wait a month or so!

Hi @teknoraver85 , your benches are quiet good. And some of known problem will be fixed on the 12-stable. One of the problem is the #FreeBSD wiki "NetworkPerformanceTuning" not up-to-date. You can read more up-to-date advice in my paper (for 11.X) here : [people.freebsd.org/~olivier/talks...](https://people.freebsd.org/~olivier/talks...)

Could you update the article, including adding your paper as a external reference/resource?

I've just added a warning and a link to my paper, but I still need to write important changes needed with 12.0 (IFLIB drivers tuning and disabling ip.redirect).

Hi @ocochardlabbe. Yes I know, I'm the on who wrote you about entropy harvesting :)  
Cheers
