Summary

There were three of us. We came to the summerhouse high in the mountains to have fishing. We had a trunk of the car filled with wine bottles. What could go wrong? We forgot corkscrew!! We could die from dehydration in less than a few hours! (yes we Russians have lower endurance to that)

Luckily, we found grandpas rusty 3d printer, and a handful of screws. Half an hour for 3d modelling, and just an hour for the printing, and we are saved! Not a single casualty from thirst starvation! (except for the guy who choke with saliva while looking at the closed bottles)

HOW TO MAKE:
Print with any plastic you have (I prefer PLA because it is hard)
Get the longest wood screw possible (I 've got some black constructions screws with diameter of 4mm). Insert/screw the screw in the handle. Add glue (cyanacrilate), plug the plug, and glue with glue.
