**Thomas Agoritsas, MD PhD**  
@ThomasAgoritsas

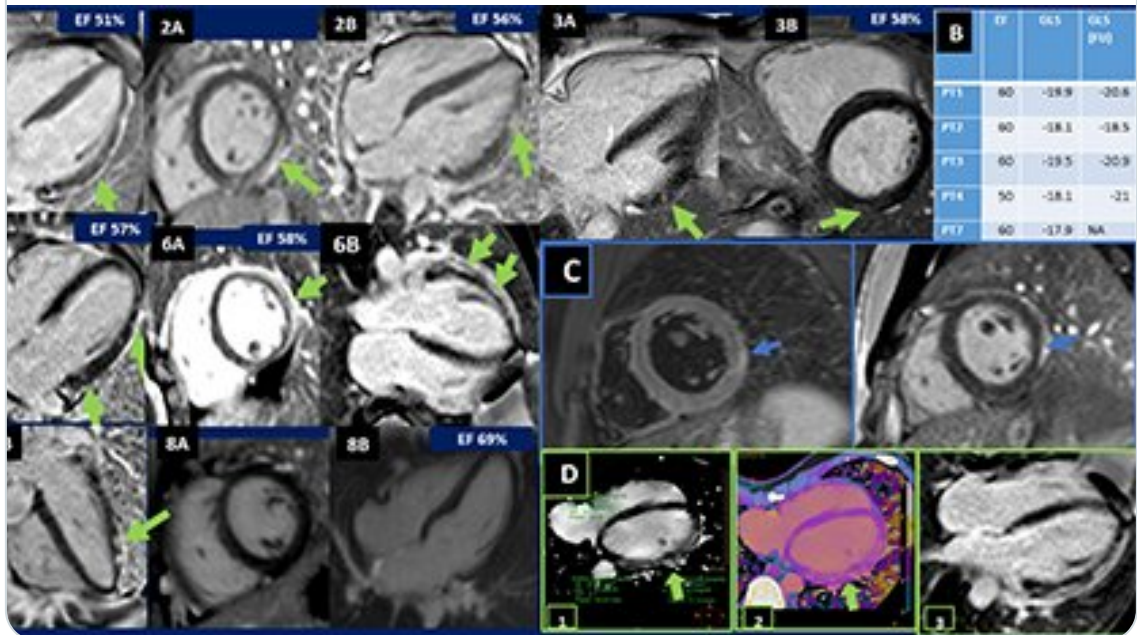

Two main findings:

1. Confirmatory but vaccine-induced myocarditis leads to rapid recovery, with no impact on ❤️ function.
2. Occurs in those with autoimmune predisposition, so probably reveals that predisposition. Covid would likely reveal it too... likely with more implications.

**Circlmaging** @Circlmaging · 17h

8 cases of covid-19 vaccination associated myocarditis showed a male predominance, autoimmunity predisposition, preservation of systolic function and good recovery @OHavakuk @DanaViskin @tasmc1 @venkmurthy @ZainabASamad #AHAJournals
