Coming soon

Fleet provides a polyglot experience, offering smart support for many languages and technologies out of the box, with support for even more planned via dedicated plugins. With the help of LSPs you will also be able to use other language services in Fleet.

Fleet is designed to automatically detect your project configuration from the source code, maximizing the value you get from its smart code-processing engine while minimizing the need to configure the project in the IDE.

Fleet offers a familiar and consistent user experience for different kinds of projects so that you will only use one IDE, no matter what technology set you use or what type of project you are working on.

Fleet offers an essential, well-integrated set of built-in tools for developers so they can enjoy their work and be more productive.

Terminal

Work with a terminal from Fleet and use shared terminals in collaborative sessions.

Git

You can review changes using a diff view, work with branches, and commit code.

Run and Debug

Run and debug your Java projects with Maven and Gradle. More languages will be supported soon.

Go To

Quickly navigate through your code by searching for usages, definitions, files, symbols, and text.

Multiplatform

Use Fleet on macOS, Windows, or Linux.

Themes

Choose between light and dark themes, with more

Plugins Coming soon

You will be able to extend Fleet with support for additional languages and

Port Forwarding

Forward ports from a remote dev environment or
