TSV backend

A TSV (https://en.wikipedia.org/wiki/Tab-separated_values) backend:

- served with HTTP Content-Type: text/tab-separated-values.
- without header.
- with a fixed list of fields

Each line looks like:

```
${id}\t${time}\t${info}\t${login}\t${message}\n
```

Fields MUST not contains the following forbidden characters:

- CHARACTER TABULATION (<http://www.fileformat.info/info/unicode/char/0009/index.htm>).
- CARRIAGE RETURN (<http://www.fileformat.info/info/unicode/char/000D/index.htm>).
- LINE FEED (<http://www.fileformat.info/info/unicode/char/000A/index.htm>).

Bouchots ([bouchot.html](#)) SHOULD replace forbidden characters by SPACE (<http://www.fileformat.info/info/unicode/char/0020/index.htm>).

id

Technical post numeric identifier.

time

Date and time of post in yyyyMMddHHmmss format.

info

Free text related to posting moule ([moules.html](#)). Usually nickname or browser User Agent (https://en.wikipedia.org/wiki/User_agent).

login

Optional authenticated user login.

message

Message body in BML ([bml.html](#)).
