

Text completion

[Translation](#)

Text completion using large language models. [GPT-J](#) is a 6 billion parameter English model. It has some abilities in other languages too, including computer languages. [Boris](#) is a fine-tuned version of GPT-J for the French language. [GPT-NeoX 20B](#) is the largest model. More information is available in the [documentation](#).

Type a text and let the neural network complete it. Each try returns a different randomly chosen completion.

Model: top-k: top-p: temperature: max tokens: stop at:

Type your text here. It will be automatically completed with a (hopefully) realistic text.
