

Downloads

Info: derived from the x3270 font, a modern format of a font with high nostalgic value

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: A small, monospace, outline font that is geometrically regular and simple

[Download](#)[Preview on ProgrammingFonts.org](#)

Reserved Font Name: AnonymousPro

Info: inspired by Anonymous g on Macintosh, since 2009, distinct 'O', 'o', 'l', 'I', '1', '1'

[Download](#)

Info: Metrically similar to Arial, pan-European WGL character set, sans serif

[Download](#)

Info: Sans serif, designed by Stephen G. Hartke which also created Verily Serif

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: nostalgic, closely based on IBM's 8x14 EGA/VGA charset

[Download](#)

Info: dotted zero, compact lowercase characters

[Download](#)[Preview on ProgrammingFonts.org](#)

Reserved Font Name: CascadiaCode

Info: A fun, new monospaced font that includes programming ligatures and is designed to enhance the modern look and feel of the Windows Terminal

[Download](#)[Preview on ProgrammingFonts.org](#)

Reserved Font Name: IBM Plex Mono

Info: font release is currently missing

[Download](#)

Info: tunable, slashed zeros, compact smaller characters

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: similar to Courier New with better readability, dotted zeros

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: A monospaced font for programmers and other terminal groupies

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: dotted zero, based on the Bitstream Vera Fonts with a wider range of characters

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: good for small screens or font sizes

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: "wibbly-wobbly handwriting-like fuzziness", takes some inspiration from Inconsolata and Monaco

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: programming ligatures, extension of Fira Mono font, enlarged operators

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: Mozilla typeface, dotted zero

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: created specifically for the Go project, looks particularly clear for use with the Go language

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: bitmap font, tall capitals and ascenders, small serifs

[Download](#)

Info: dotted zero, short descenders, expands upon work done for Bitstream Vera & DejaVu, legible at common sizes

[Download](#)[Preview on ProgrammingFonts.org](#)

Reserved Font Name: Haskellig

Info: monospaced ligatures, makes composite glyphs (e.g. ->) more readable, especially in Haskell

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: Novel and unique design, dotted zero

[Download](#)

Reserved Font Name: Hermit

Info: symbols stand out from common text

[Download](#)[Preview on ProgrammingFonts.org](#)

Reserved Font Name: IA-Writer

Info: A heavy modification of IBM's Plex font

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: slashed zero, takes inspiration from many different fonts and glyphs, subtle curves in lowercase

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: Inconsolata with straight quotes

[Download](#)

Info: Inconsolata with added the Cyrillic alphabet

[Download](#)

Info: narrow and horizontally tight characters, slashed zero

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: JetBrains officially created font for developers

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: very light and thin characters, sharp m's, 'o' and 'O' very similar

[Download](#)[Preview on ProgrammingFonts.org](#)

Reserved Font Name: LiberationMono

Info: 'o' and 'O' very similar, very short tight descenders

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: slashed zeros, customized version of Apple's Menlo

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: dotted zeros, slightly exaggerated curvy characters, compact characters

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: ligatures, distinguishable glyphs with short ascenders & descenders, large operators & punctuation

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: keeps in mind differentiation of characters and resolution sizes

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: Multiple styles and weights, many glyph sets (e.g. Kana glyphs)

[Download](#)

Info: 'o' and 'O' very similar, characters are either very curvy or straight lined

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: looks best with anti-aliasing turned off, squared off character corners, vertically tight small 's'

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: Designed particularly for use at small point sizes

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: designed specifically to alleviate reading errors caused by dyslexia

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: An open source font, family inspired by Highway Gothic

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: dashed zero, curved and straight character lines

[Download](#)[Preview on ProgrammingFonts.org](#)

Reserved Font Name: ShareTechMono

Info: dotted zeros, distinguishable 1 and l, curved and straight character lines

[Download](#)[Preview on ProgrammingFonts.org](#)

Reserved Font Name: SourceCodePro

Info: Monospaced font family for user interface and coding environments

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: Squarish character lines, dotted zero, aggressive parenthesis

[Download](#)[Preview on ProgrammingFonts.org](#)

Reserved Font Name: Terminus

Info: Squarish characters that are slightly askew

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: Some similarities to Times New Roman, designed by Steve Matteson, includes pan-European WGL character set

[Download](#)

Info: specially created for Ubuntu

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: dotted zeros, used the 'n', 'o', 'H' & 'O' Latin characters as a base for design

[Download](#)[Preview on ProgrammingFonts.org](#)

Info: clean, crisp and narrow, with a large x-height and clear punctuation

[Download](#)[Preview on ProgrammingFonts.org](#)
