Massimo @Rainmaker1973

This remarkable picture of Almaty, Kazakhstan, taken by Igors Jefimovs in January 2014, shows an impressive separation of a very thick smog and open air due to a very intense inversion buff.ly/2lvQSiC [more about the inversion: buff.ly/2phGDoO]

LosAngeles also vulnerable to inversions; given high use of autos per capita & a dismantled transit system, air pollution levels can get scary. Big for the Santa Ana (& hybrid)

When I traveled in Almaty in 2011, it looked nothing like this! What happened between 2011 and 2014 in Kazakhstan? What changed?
