South Korean professor Cho Jae-weon invented a toilet that turns poop into energy and pays people in digital currency.

A person defecates~ 500g/day converted into 50 liters of methane gas which generates 0.5 kWh.

Toilet users earn Gcool, a literal sh3t coin.

Science Walden: Exploring the Convergence of Environmental Technologies with Design and Art
Science Walden, which is inspired by two prominent literary works, namely, Walden by Henry David Thoreau (1817–1862) and Walden Two by Burrhus Frederic Skinner (1904–1990), is aimed at establishing a...

South Korean toilet turns excrement into power and digital currency
Using a toilet can pay for your coffee or buy you bananas at a university in South Korea, where human waste is being used to help power a building.

Is it anything more than an anaerobic digestion tank that pays people for their waste?
