

View and share **BlueSky** threads without needing a BlueSky account.

[View](#)

How it works (BlueSky mobile & web app)

Reply anywhere in a BlueSky thread and mention [@skyview.social](#) using one of the following commands. The Skyview bot will reply to you with a link, which shows the BlueSky thread depending on your command.

[@skyview.social tree](#)

Shows the entire conversation as a nested tree. Great for seeing all comments in a thread.

[Example](#)

[@skyview.social unroll](#)

Only shows the top post and replies by the same author. Great for viewing long form content consisting of multiple chained posts. [Example](#)

[@skyview.social embed](#)

Only shows the post to which you reply with a mention of [@skyview.social](#). Also shows HTML you can add to your own website or blog to embed the post. [Example](#)

How it works (this website)

1. Open a post in the BlueSky app or on the BlueSky website
2. Click the three dots
3. Click "Share" and copy the URL
4. Paste the URL into the text field above and click "View"
5. Set your preferred viewing type ("tree", "embed", "unroll") and share it by clicking "Share"

Privacy on BlueSky (or lack thereof)

By design, all your BlueSky posts are available to anyone with an internet connection. They do not even need a BlueSky account to view all your posts (and images). All they need is your BlueSky user name. This is by design. There is no privacy on BlueSky.

Here's a [post of mine on BlueSky](#). You'll need an account to view it on the BlueSky website or in the BlueSky app.

And here is the [same post, publically available to anyone with an internet connection](#). Yes, it reads like gibberish, but computer people can take this data and reconstruct all of the post's information.

That's essentially what Skyview does. Without needing a BlueSky account. Here is the [same post viewed via Skyview](#).

Skyview runs directly in your browser. Everything you do happens directly on your device. Skyview does not collect any data whatsoever. It also does not store any data users are viewing through it.

Skyview is lovingly made by [Mario Zechner](#)

Kindly supported by [Mediamask](#), the most amazing template engine for image generation

Logo by [Jan Hax](#)

No data is collected, not even your IP address.
