Do you prefer to deploy in the Cloud?

Titan SFTP Server can be deployed in **whatever environment you choose**. While traditional on-premises licensing is readily available, we know the value of having a fully-featured SFTP server in the cloud.

Titan SFTP Server is available in the [Azure](#), [AWS](#) and [Google](#) marketplaces for **both** Windows and Linux. Titan cloud offerings provide the security and performance of an on-premises SFTP solution, with the flexibility and lower upfront costs that the cloud provides. And, you can easily add servers to accommodate peak processing requirements while controlling costs.

- Easy to setup and configure in the cloud.
- No need to maintain expensive hardware or worry about server repair and replacement costs.
- Preconfigured to streamline the setup process

- Configure BLOB Storage seamlessly.
- Use AD to pull users into Titan cloud, just as with on-premises AD.

Cost Benefits of Titan in the Cloud

Titan SFTP Server in the cloud offers the exact same functionality as an on-premises deployment, but expenses are moved from capital expenditures (CapEx) to operating expenditures (OpEx). Moving expenses into operational budgets reduce time and effort spent in procurement and makes budgeting easier to predict and manage.

Fees for Titan SFTP Server in the cloud are based on monthly usage, so you only pay for what you use.
