15.3 **yes**: Print a string until interrupted

yes prints the command line arguments, separated by spaces and followed by a newline, forever until it is killed. If no arguments are given, it prints ‘y’ followed by a newline forever until killed.

Upon a write error, **yes** exits with status ‘1’.

The only options are a lone `--help` or `--version`. To output an argument that begins with ‘-’, precede it with `-`, e.g., ‘`yes -- --help`’. See [Common options](#).
