[FAQs](#)

Q: Will the different capacity work with my laptop?

A: Yes. We guarantee that it will fit, work and is 100% compatible with your laptop because the capacity of a battery does not affect its compatibility. A higher capacity battery will simply power your device for longer before you need to charge it. It is important to check the dimensions and weight in addition to the capacity because sometimes higher capacity batteries can be larger in size, making them impractical for some uses even though they are compatible.

Q: Your Dell Latitude 5300 2-IN-1 battery has a different voltage to my battery, can I use it?

A: When replacing your notebook battery, you should always choose a battery with the same voltage as your original. There are however a couple of exceptions to this rule: For example voltages from the same pairs below, are compatible:
3.6V / 3.7V
7.2V / 7.4V
10.8V / 11.1V
14.4V / 14.8V

Q: What can I do to make my Dell Latitude 5300 2-IN-1 laptop battery last longer?

1 Dim your screen.
2 Keep your laptop out of hot and cold.
3 Don't run out of your Dell Latitude 5300 2-IN-1 notebook battery.
4 Disable Unused Devices and Ports (like USB Speakers or external drive).
5 Choose the right Dell Latitude 5300 2-IN-1 Replacement battery. Under the same use conditions, a lower capacity battery will wear out faster than a higher capacity battery because it has to be charged more often.

Note: All batteries wear with use and time. When you find the runtime is no longer satisfactory, it may be time to purchase a new battery.

Q: Can my Dell Latitude 5300 2-IN-1 laptop battery be "overcharged"?

A: No, the Dell Latitude 5300 2-IN-1 battery has built-in controls which stop the charging process when the battery is full.
