Thanks for making this historical data available!

It might be worth switching to [parquet](#) (supported in pandas), the dataset would be much smaller and faster to load:

- historique_stations.csv: 1.5GB and 424MB zip compressed
- historique_stations.parquet (with snappy compression): 78 MB and probably less after converting dates and GPS coordinates to correct dtype

Stored with [pandas.DataFrame.to_parquet](#),

```
df.to_parquet("historique_stations.parquet", compression="snappy")
```

This would require adding pyarrow as a dependency
