A language compiled to Bash.

A modern, type-safe programming language that catches bugs and errors at compile time.

Download for Linux

`show_docs()`

`$ Click:`

```
import { join } from "std/text"

fun get_weather(cities: [Text]): Null {
  let temperatures = [Text]
  for city in cities {
```

```
const result = $ curl -s "https://wttr.in/{city}?format=1" $ failed
{
  echo "Error: Failed to get weather for {city}"
  continue
}
temperatures += [result]
}
return temperatures
}
```

```
get_weather(["New York", "Prague", "Kuala Lumpur"])
```

Aa

Modern Syntax

ECMA Script-like syntax.

Runtime Safety

Amber ensures that you handle everything that could fail.

Type Safety

Use strong typing to catch bugs at compile time.

Instant Docs

Generate
documentation
automatically.

Bash Ready

Interoperate with
Bash scripts.

Library baked in

Standard library
with many useful
functions.
