No-as-a-Service

Ever needed a graceful way to say “no”?

This tiny API returns random, generic, creative, and sometimes hilarious rejection reasons — perfectly suited for any scenario: personal, professional, student life, dev life, or just because.

Built for humans, excuses, and humor.

This project is sponsored by [GitAds](#).

You can get your GitHub repository sponsored too — [create your account now](#).

API Usage

Base URL

`https://naas.isalman.dev/no`

Method: GET

Rate Limit: 120 requests per minute per IP

Example Request

`GET /no`

Example Response

```
{
  "reason": "This feels like something Future Me"
}
```

Use it in apps, bots, landing pages, Slack integrations, rejection letters, or wherever you need a polite (or witty) no.

Self-Hosting

Want to run it yourself? It's lightweight and simple.

1. Clone this repository

```
git clone https://github.com/hotheadhacker/no-as-a-service
cd no-as-a-service
```

2. Install dependencies

```
npm install
```

3. Start the server

```
npm start
```

The API will be live at:

`http://localhost:3000/no`

You can also change the port using an environment variable:

```
PORT=5000 npm start
```

Project Structure

```
no-as-a-service/
├── index.js           # Express API
├── reasons.json      # 1000+ universal reject:
├── package.json
├── .devcontainer.json # VS Code / Github devcon
└── README.md
```

package.json

For reference, here's the package config:

```
{
  "name": "no-as-service",
  "version": "1.0.0",
  "description": "A lightweight API that returns random rejection reasons",
  "main": "index.js",
  "scripts": {
    "start": "node index.js"
  },
  "author": "hotheadhacker",
  "license": "MIT",
  "dependencies": {
    "express": "^4.18.2",
    "express-rate-limit": "^7.0.0"
  }
}
```

Devcontainer

If you open this repo in Github Codespaces, it will automatically use `.devcontainer.json` to set up your environment. If you use it in VSCode, it will ask you if you want to reopen it in a container.

Projects Using No-as-a-Service

Here are some projects and websites that creatively integrate [no-as-a-service](#) to deliver humorous or programmatic "no" responses:

- [no-as-a-service-rust](#)
Rust implementation of this project.
- [CSG Admins](#)
A system administration and gaming service hub using no-as-a-service to provide playful negative responses across some admin panels and commands.
- [FunnyAnswers - /no endpoint](#)
A humor-focused API playground that includes a mirror or wrapper for no-as-a-service, perfect for developers exploring fun HTTP-based responses.
- [Gerador de Frases Aleatórias \(pt-BR\)](#) Uma reinterpretação em Python com frases em português, frontend e novas categorias.
- [NoAsAnApp](#)
A simple native Android app calling no-as-a-service to provide negative responses.
- [FunnyReasons](#)
A simple Web app using no-as-a-service to provide funny reasons to say No.
- [How About No?](#) A basic GUI using no-as-a-service as the backend. Built with docker in mind.
- [no-as-a-service-asp](#)
A straight-forward implementation of NaaS in ASP.NET Core
- [No as a Service - Raycast Extension](#)
Get a random No from within Raycast. Just install the extension from the Raycast store, open Raycast, then type in 'Random No'. Raycast extension: [No as a Service](#).
- [Nopeify](#)
A simple native iOS app calling no-as-a-service to provide negative responses.
- [No-as-a-Service - Slack App](#)
Get a random no from within Slack. [Install](#) the app to your workspace and then use the `/no` command to get a random response.
- [No-as-a-Service - Signal Bot](#)
Get a random no from within Signal. Deploy the Docker container, link your Signal account, and use the `/no` command to get a random response.
- [No-as-a-Service GNOME Search](#) GNOME search provider for the No-as-a-Service API. Type 'no' to get a random excuse. Click or press Enter to copy to clipboard.
- [No MCP](#)
Perfect for when you want your AI to be consistently negative or just want to add some humor to your MCP setup.
- [Your Project Here?](#) If you're using no-as-a-service in your project, open a pull request to be featured here!

Want to use no-as-a-service in your own project? Check out the usage section in this README and start returning "no" like a pro.

About

No-as-a-Service (NaaS) is a simple API that returns a random rejection reason. Use it when you need a realistic excuse, a fun “no,” or want to simulate being turned down in style.
