About This Game

 The planet is full of wars—it's a painful topic for everyone. After all, the world is structured in such a way that every day, we see the consequences of even distant conflicts. We see them on TV as news, we see them nearby as refugees.

 Modern games are not just entertainment—they are another form of media, another way to convey information, often even more effectively than the most detailed analytical articles or news segments. We want to use this medium to show what happened in Ukraine at the beginning of this war, when it was supposed to end in a matter of days but instead turned into a years-long slaughter.

 Ukraine has been covered in reports and documentary films. But we want to tell this story through the lens of a game. And don't let the word 'game' mislead you. This is not a documentary, but it portrays the events of the first days of this war with full seriousness—from the moment of the brilliant Russian airborne assault on the outskirts of Kiev, to the time when the war seemed poised to end with the signing of a draft peace agreement in Istanbul in March 2022.

Gostomel Heroes is:

· A **real-time strategy game** with a high degree of realism.

· The game does **not** use "health bars" for vehicles. Damage is calculated **module by module**, factoring in armor protection and the power of incoming fire. Damage affects the functionality of each module.

· An **advanced cover system** that drastically improves infantry survivability on the battlefield, adding tactical depth to flanking maneuvers.

· The game simulates **soldiers' physical and moral condition**—their behavior on the battlefield and combat effectiveness depend on these factors. Troops must be withdrawn for resupply and rest.

· **Realistic war logistics**: Equipment and ammunition require replenishment. Units cut off from supply lines risk annihilation.

· A **high-quality physics-based destruction system** for buildings and objects (beyond just visuals, this heavily impacts mission tactics, especially in urban combat).

· **Persistent squads and vehicles** that carry over between missions.

· **Experience progression**: Soldiers and crews gain experience, improving their effectiveness over time.

· **Player choice in unit selection**: You decide which squads and vehicles advance to the next mission.

· **Between-mission customization**: Upgrade vehicles, equip soldiers, and modify infantry weapons.

· **Capture and use enemy equipment**.

· **Diverse tactical options**: Smoke screens, airstrikes, artillery support, building assaults, reconnaissance drones, and large UAVs. The game realistically replicates military tactics from the first half of 2022
