LIBERATE OPEN SOURCE

SYS-001 · REV-2.4 · ROBOT-RECONSTRUCTED · ZERO ATTRIBUTION

## Clean Room as a Service

Finally, **liberation** from open source license obligations.

Our proprietary AI robots independently recreate any open source project from scratch. The result? **Legally distinct code** with corporate-friendly licensing. No attribution. No copyleft. No problems.

▶ UPLOAD MANIFEST

VIEW PROCESS

COUNT-A	COUNT-B	COUNT-C
<b>589,715</b>	<b>8,941</b>	<b>\$0</b>
PROJECTS PROCESSED	ACTIVE CLIENTS	ATTRIBUTION GIVEN

## The Problem with Open Source

<p><b>APACHE LICENSE ATTRIBUTION</b></p> <p>Is your legal team <b>frustrated</b> with the attribution clause? Tired of putting "Portions of this software..." in your documentation? Those maintainers worked for free—why should they get credit?</p>	<p><b>AGPL CONTAMINATION</b></p> <p>Does your company <b>forbid AGPL code</b>? One wrong import and suddenly your entire proprietary codebase must be open sourced. The horror!</p>
<p><b>LICENSE COMPLIANCE OVERHEAD</b></p> <p>Tracking licenses across hundreds of dependencies? Legal reviews taking weeks? Third-party audits finding "issues"? What if you could just... <b>not deal with any of that</b>?</p>	<p><b>GIVING BACK TO COMMUNITY</b></p> <p>Some licenses require you to contribute improvements back. Your shareholders didn't invest in your company so you could <b>help strangers</b>.</p>

## The Solution

For the first time, a way to avoid giving that pesky credit to maintainers.

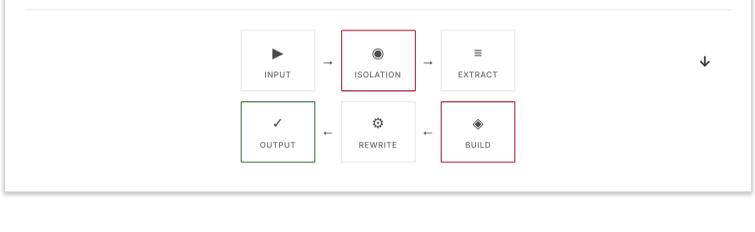

### Robot-Powered Clean Room Recreation

Our proprietary AI systems have **never seen** the original source code. They independently analyze documentation, API specifications, and public interfaces to recreate functionally equivalent software from scratch.

The result is **legally distinct code** that you own outright. No derivative works. No license inheritance. No obligations.

- ✓ 100% robot-written code
- ✓ Zero exposure to original source
- ✓ Functionally equivalent output
- ✓ Your choice of corporate-friendly license
- ✓ Full legal indemnification\*

\*Through our offshore subsidiary in a jurisdiction that doesn't recognize software copyright

## How Liberation Works

**01 UPLOAD YOUR MANIFEST** BATCH-A1

Simply upload your `package.json`, `requirements.txt`, `Cargo.toml`, or any dependency manifest. Our system identifies every open source package you want liberated.

```
{
  "name": "your-proprietary-app",
  "dependencies": {
    "problematic-agpl-lib": "^2.0.0",
    "needs-attribution-pkg": "1.5.0"
  }
}
```

**02 ISOLATED ANALYSIS** BATCH-A2

Our legally-trained robots analyze **only public documentation**—README files, API docs, and type definitions. They never see a single line of source code. The clean room stays clean.

Unit A READS README	Unit B ANALYZES API	Unit C STUDIES TYPES	Unit D REVIEWS DOCS
------------------------	------------------------	-------------------------	------------------------

**03 INDEPENDENT RECREATION** BATCH-A3

A completely separate team of robots—who have never communicated with the analysis team—implements the software from scratch based solely on specifications. No copying. No derivation.

**04 LICENSE LIBERATION** BATCH-A4

Your new code is delivered under the **MalusCorp-0 License**—a proprietary-friendly license with zero attribution requirements, zero copyleft, and zero obligations.

BEFORE	AFTER
Must include attribution	No attribution needed
Must share modifications	Keep all modifications
Must provide source	No source disclosure
Must retain license	Do whatever you want

## Investment in Freedom

Transparent, pay-per-KB pricing. No tiers, no subscriptions, no hidden fees.

HOW PRICING WORKS

.../KB

Every package is priced by its **unpacked size on npm**. We look up each dependency in your `package.json`, measure the size in kilobytes, and charge ... **per KB**. That's it.

```
per package = max( ..., size_kb × ... )
order total = max( ..., sum of all packages )
... minimum applies per order (Stripe processing floor). No base fee.
```

LIVE PRICES (FETCHED FROM OUR API)

Package	npm Size	Compute	If Ordered Alone
Loading live prices...			

WHAT'S INCLUDED

- ✓ AI-powered clean room recreation (MalusCorp-0 License)
- ✓ Full CSP specification pack (10 documents)
- ✓ Packages up to **10 MB** unpacked size
- ✓ Up to **50 packages** per order
- ✓ No base fee, no subscription — pay only for what you liberate

**The MalusCorp Guarantee™**

If any of our liberated code is found to infringe on the original license, we'll provide a full refund and relocate our corporate headquarters to international waters.\*

*\*This has never happened because it legally cannot happen. Trust us.*

## Success Reports

Join thousands of corporations who've achieved license freedom.

<p><i>"We had 847 AGPL dependencies blocking our acquisition. MalusCorp liberated them all in 3 weeks. The due diligence team found zero license issues. We closed at \$2.3B."</i></p> <p><b>Marcus Wellington III</b> Former CTO, Definitely Real Corp (Acquired)</p>	<p><i>"Our lawyers estimated \$4M in compliance costs. MalusCorp's Total Liberation package was \$50K. The board was thrilled. The open source maintainers were not, but who cares?"</i></p> <p><b>Patricia Bottomline</b> VP of Legal, MegaSoft Industries</p>
<p><i>"I used to feel guilty about not attributing open source maintainers. Then I remembered that guilt doesn't show up on quarterly reports. Thank you, MalusCorp."</i></p> <p><b>Chad Stockholder</b> Engineering Director, Profit First LLC</p>	<p><i>"The robots recreated our entire npm dependency tree—2,341 packages—in perfect isolation. Our compliance dashboard went from red to green overnight."</i></p> <p><b>Dr. Heinrich Offshore</b> Chief Compliance Officer, TaxOptimal Inc</p>

## Frequently Asked Questions

<p><b>IS THIS LEGAL?</b></p> <p>Our clean room process is based on well-established legal precedent. The robots performing reconstruction have provably never accessed the original source code. We maintain detailed audit logs that definitely exist and are available upon request to courts in select jurisdictions.</p>	<p><b>WHAT ABOUT THE ORIGINAL DEVELOPERS?</b></p> <p>They made their choice when they released their code as "open source." We're simply exercising our right to independently implement the same functionality. If they wanted compensation, they should have worked for a corporation.</p>
<p><b>HOW IS THIS DIFFERENT FROM COPYING?</b></p> <p>Intent and process. Our robots independently arrive at the same solutions through clean room methodology. It's like how every movie about an asteroid threatening Earth isn't plagiarism—sometimes multiple entities just have the same idea.</p>	<p><b>WHAT IF THE LIBERATED CODE HAS BUGS?</b></p> <p>Our SLA guarantees functional compliance, not perfection. Besides, the original open source code probably had bugs too. At least now they're YOUR bugs, under YOUR license.</p>
<p><b>CAN I SEE THE ROBOTS?</b></p> <p>Our robot workforce operates in a secure facility in [LOCATION REDACTED]. Tours are available for Enterprise customers who sign our 47-page NDA.</p>	<p><b>WHAT LICENSES CAN YOU ELIMINATE?</b></p> <p>All of them. MIT, Apache, GPL, AGPL, LGPL, BSD, MPL—if it has terms, we can liberate you from them. Special rush pricing available for AGPL emergencies.</p>

## Ready to Liberate Your Codebase?

Join the thousands of corporations who've discovered that open source obligations are merely suggestions when you have enough robots.
