

NEW Full OpenClaw import — switch in one click >

# A Rust-native claw you can trust

One binary — sandboxed, secure, yours.

Get Started

 Documentation

## Secure by design

Your keys and private data never leave your machine. Sandboxed by default — your AI can't touch your filesystem unless you say so.

## Your hardware

Runs on a  Mac Mini, a Raspberry Pi, or any server you own. Always on, always local — like a house elf for your digital life.

 macOS  Linux  Windows

## Full-featured

Telegram, WhatsApp, Discord, Teams, voice, memory, scheduling, tools — all built-in. No plugin marketplace to get supply-chain attacked through.

Local AI assistants are still early software. Treat Moltis as alpha: run it carefully, review tool permissions, and avoid giving broad system access you do not need. Use responsibly.
