Le développeur de VeraCrypt indique que Microsoft a désactivé, sans avertissement clair, le compte utilisé pour signer les pilotes et le chargeur de démarrage du logiciel. Cette décision menace la diffusion de futures versions pour Windows, en particulier sur les machines protégées par Secure Boot.

Welcome

We and our 225 **partners** wish to store and access information on your devices (such as cookies and pixels), and collect personal data on this site to process it along with both known and future information (such as identifiers, browsing history, preferences, purchases, phone number, postal, IP and email addresses, precise geolocation, etc.).

This is used to develop and provide you with services, content, commercial offers, and advertisements across your various devices and screens (including by email, mail, texts, phone, audio, and video), to personalize and measure them, and to conduct audience research and analysis.

You can "accept all" and withdraw your consent at any time via the "cookies" footer link. You can also "set detailed preferences" to object to more limited processing activities. These choices remain valid for 6 months.

Le logiciel **VeraCrypt** permet de chiffrer des fichiers ou des disques entiers. Son auteur, Mounir Idrassi, explique que la désactivation de son compte de signature bloque aujourd'hui la validation normale des composants Windows du projet.

Microsoft coupe l'accès au compte de signature
