Russia and China have developed a joint plan to counter the U.S. Starlink satellite communications constellation.

This was reported by [The Insider](#) as part of a joint investigation with Der Spiegel and Le Monde.

Journalists obtained documents related to Russian-Chinese military cooperation. Among them are four presentations delivered in November 2023 at the Third Sino-Russian Forum on Military-Technical Cooperation in Guangzhou.

This forum is a regular bilateral meeting platform, the existence of which had not been publicly disclosed. In addition, the investigators obtained a bilateral working protocol summarizing the results of negotiations that took place in Moscow in June 2023.

The documents cover five areas of military cooperation: space weapons and satellite-killing capabilities, integrated air and missile defense systems, autonomous loitering munitions operating in swarms, next-generation armored combat vehicles, and military aviation.

In the Chinese city of Guangzhou, engineers from the country's leading space and defense enterprises gathered for a private meeting. One of the key topics was a discussion of ways to neutralize the Starlink system.

The documents from the Third Sino-Russian Forum on Military-Technical Cooperation include a separate presentation dedicated to countering Starlink. Although the document is written in both Chinese and Russian, numerous errors in the Russian text indicate that it was prepared by the Chinese side.

The presentation was delivered by two researchers from the China Aerospace Science and Technology Corporation (CASC) – Huang Hui and Ren Jie.

CASC is China's primary state-owned contractor in the space sector. The document is classified as "for internal use only," which is one level higher than materials available for public review.

The first phase of countering Starlink involves joint Russian-Chinese legal and diplomatic pressure.

In addition to the battle for the radio frequency spectrum, the researchers propose creating a joint electronic countermeasures system that would include "power suppression and adaptive interference." Its goal is to selectively block Starlink communications in specific geographic areas.
