

Instances

Vbeyler edited this page 16 hours ago · [957 revisions](#)

Official

URL	Country	Issuer & SSLabs verification link
nitter.net		Let's Encrypt

Third-party Nitter services

Name	Description
Twiiit	Randomly picks a server from this wiki
nitter-status	Instance uptime & health checks

Public

Note: Please add new instances to the bottom to preserve the order. In order to make it easier to preserve the right syntax and the proper alignment of the table in the Markdown source, it is recommended to copy everything into a text editor, edit it there, then copy the result back to the GitHub editor.

✖¹ means the instance isn't online.

✖² means the instance isn't working properly, mostly shows if an instance misses a vital change, e.g. timelines not loading.

³: Javascript files loaded in the pages for analytics purpose.

For a list of which instances are **working right now**, see the [nitter-status](#) project above. This table is the basis for instances listed on the status page.

URL	Online ¹	Working ²	Country
xcancel.com	✓	✓	
nitter.poast.org	✓	✓	
nitter.privacyredirect.com	✓	✓	
nitter.tiekoetter.com	✓	✓

Public instances performance community recommendations

@unixfox created a GitHub repository where you can pick configurations into your public instance for improving its performance: <https://github.com/unixfox/nitter-public-instances-customizations>
