

Codeberg Service Status

Performance degradation for unauthenticated traffic

We're facing severe traffic spikes for unauthenticated traffic, impacting performance and availability. Our primary goal is to avoid interruptions for authenticated users of Codeberg.org.

⚠ Partially Degraded Service

This is an overview of the Codeberg Infrastructure. Uptime stats are calculated over the past 24 hours only.

[Status messages on Mastodon](#)

Regular maintenance window: We're meeting every Tuesday starting 18.00 Berlin time (currently 17.00 UTC), lasting up to 8 hours. While we announce large scheduled downtimes in advance, there might be minor interruptions due to maintenance work happening during the meeting. Please be patient in this case.

The 14-days uptime of our primary instance is:

Uptime (336h) **99.11%**

Primary Services

94.07% Codeberg.org (authenticated traffic) 22m now

94.86% Codeberg.org (unauthenticated traffic) 22m now

100% [Codeberg Translate](#) 1h now

Codeberg Pages

77.9% [Codeberg Pages \(legacy\)](#) 22m now

94.44% Git Pages 1h now

Hosted CI/CD

97.36% Hosted CI/CD: Forgejo Actions 1h now

87.28% Hosted CI/CD: Woodpecker 22m now

Recovered after power outage

On 2026-06-28, our servers were down from 00:18 CEST to 07:27 CEST due to a power outage. We are back now!

June 27, 2026

Power Outage

Since Sunday 00:18 CEST, Codeberg.org is offline. From our investigation, our primary location lost power in our racks, leaving the majority of our servers and some network switches offline. We're waiting for a fix from the datacenter operator.

June 23, 2026

High false positive rate

Due to some changes in our infrastructure and traffic routing, we have seen accelerated rates of false positive downtime reports that do not match actual availability status.

Hardware update

We are rebooting and upgrading BIOS and Firmware on the server that hosts mosts services. This will take at most 10 minutes.

We have rebooted this server. We are working on getting pages back online.

November 12, 2025

Hardware maintenance

Impact:

- Several short interruptions of Forgejo ("Codeberg.org") service in the next 24 hours
- As a consequence, interruptions or transient failures in connected services (e.g. hosted CI/CD, Weblate)
- Potential performance degradation

Status:

- The planned changes have been conducted and the affected servers are up and running again. We're still monitoring the systems in case of follow-up issues.
- The hardware maintenance has continued at 17.55 UTC. Server replacement is ongoing.
- The first round of failover was successfully completed. Disruption was longer than expected due to human error.

Background:

We are replacing 1 of 3 physical servers powering Codeberg operations, upgrading computing capacity and replacing a machine with a broken mainboard. To complete the operation, several services need to be moved across servers, leading to periods of unavailability. Also, computing capacity is temporarily reduced due to the hardware constraints or blocked by backfilling operations (data replication from MariaDB/Galera database and Ceph storage clusters).

We aim to keep the impact as minimal as possible. Unfortunately, our current deployment of Forgejo only supports exactly one primary instance, and each failover / reconfiguration currently involves a downtime of about 1 minute.

Codeberg.org update

Codeberg.org will be down for a few minutes to deploy spam fighting features.

Pages maintenance

We are performing scheduled maintenance on Codeberg Pages. While we didn't expect any impact on the live operation, we are currently investigating "502 Bad Gateway" responses on some sites.

Codeberg server upgrade

21:26 UTC: We have upgraded our last server to Debian Trixie. We are bringing up all services up and monitoring the situation.

20:44 UTC: We are upgrading our last server to Debian Trixie, the upgrade with the other server went very well and had minimal downtime. This servers hosts codeberg.org and will be unavailable during the upgrade.

19:59 UTC: The server upgrade is done we are bringing all services up and monitoring the situation.

We are expecting to upgrade one of our servers to Debian Trixie this evening (CEST). This server hosts Codeberg CI (Woodpecker), Codeberg Translate and Codeberg pages will therefore be unavailable during the upgrade.

It is possible that other services are impacted, our filesystem (Ceph) will be put into maintenance mode during the upgrade.
