Build your software factory

Turn enterprise intent and codebase context into validated production software. Use Droid to plan, build, and validate changes, while your team sets the goals and policies.

Analytics

Track adoption and consumption per developer and per team, with real-time usage metrics and exportable reports.

Droid Computers

Purpose-built hardware that runs your agents locally with dedicated compute, keeping state persistent across sessions.

Agent Readiness

Measure your organization's readiness score and track progress across every repository over time.

Mission Control

Monitor active missions, track worker progress, and view detailed execution logs in real time.

Automations

Put repetitive engineering work on autopilot with droids that plan, execute, and validate on a shared context.

Model Routing

Route every task to the best model for the job, balancing quality, speed, and cost automatically.

Code Review

Get a thorough review on every pull request, with inline comments that catch real issues before they merge.

AutoWiki

Give every repository a living wiki that stays current as the code changes, so anyone can navigate the system.
