standard > post request

Post request

[Bouchots](#) MUST expose an HTTP endpoint for posting messages.

This endpoint SHOULD accepts HTTP request using POST method.

Request body

Post endpoint SHOULD accept following fields in request body in multipart/form-data format.

message

Mandatory message body in [BML](#) format.

[Bouchots](#) SHOULD expect error invalid BML, invalid encoding and generally shit posting from [moules](#).

lastId

Optional unique identifier of last known post by [coincoin](#).

Request headers

User-Agent

Optional free text related to posting [moule](#). Usually nickname or browser [User Agent](#) [↗](#).

Response

Response body

If lastId parameters is set, [Bouchots](#) SHOULD produce an [XML backend](#) or [TSV backend](#) as response body with posts newer than lastId.

Response headers

X-Post-Id

Optional unique identifier of the post inserted by the request.

Alternatives

Alternative post endpoint methods/parameters/body/headers MAY be used and documented using [discovery](#) file.
