# v0.3.0 Latest

Compare

**github-actions** released this 13 minutes ago v0.3.0 1baf38d

# roinroin v0.3.0

## Conversations

- Open the full discussion tree of any post with `Shift+right-click` in a panel on the right: ancestors, replies, nested replies and every branch.
- Conversation panels follow new replies live, apply the timeline filters, show the originating board(s), and split into columns for distinct conversations.
- Each panel has its own close button and keeps following the bottom until you scroll up.

## Composer

- Clock quotes, totoz and emoji insertions now land at the caret instead of appending to the end of the draft.
- Supported BML formatting tags insert their closing tag automatically.
- `Alt+B` / `I` / `U` / `S` / `T` / `C` / `P` insert a tag pair with the caret between the tags, or wrap the current selection.
- `Alt+M` inserts a Moment marker; selected text is appended after the "Moment" label.
- Inline totoz autocompletion and link hover previews.

## Rendering and reliability

- Color emoji rendering with grapheme-safe trimming for flags and composed emoji.
- Highlight your own posts in the timeline.
- More robust TSV/XML duplicate handling and integer edge cases.
- App state split into focused modules for easier maintenance.
