Introducing Communicator

Talk without talking.

Input tool at the speed of speech, clarity and mobility

Visit us to learn more

Voice flows perfectly,

Speak silently at the speed of speech.

Write at the speed of custom, without typing. Silent Type turns your thoughts almost inaudible audio, even mouthing into text at 200+ WPM.

Think quietly, as in conversation with AI. The words, as fast as you want them. The room stays quiet.

Your coworker is a

Control your coding agents without annoying your coworker.

Sandbox changes in your terminal with hypervisor-level security. Your agents become tool, without a word spoken aloud.

This is my stack

Add Google OAuth to the login flow. When the user clicks the login button...

Good questions.

- How much do I have to move my mouth?
- Does Subvocal use or need cameras?
- Can Subvocal read my thoughts?
- Does background noise affect it?
- How accurate is it?
- Do I have to train it to recognize me?
- Can I use it in the apps I already use?
- Is Subvocal always listening or recording me?

Be the first to get it.

Reserve Subvocal
